Relayr Recruitment Team

March 2, 2017

BERLIN, GERMANY

Job Application for Full Stack Developer

Dear Sir or Madam,

About Me

I'm a graduated software engineer with 3 years of formal work experience, and many more years of freelancing and academic work experience. I'm a passionate for new technologies, and extremely passionate for fast, modular and extendable software. I'm very detail oriented, and I would say that I prefer quality over speed almost every time.

I have 2 years of experience as lead developer in the IoT industry for Government entities (Ministry of Energy of Chile, Statal Bank of Chile), and private institutions. In these 2 years of experience, I also worked closely with energy efficiency and sustainability topics, developing software solutions from scratch. My main focus as software engineer is software architecture and project management.

Why Relayr?

I'm interested in a position for Full Stack Developer because Relayr has one of the most interesting and complete IoT platforms I've ever found. Way back when I found out about the *Wunderbar*, I fell in love with the REST API provided and all the tidbits around the Relayr Dashboard (and the awesome MQTT protocol). So, when I went to visit the Relayr headquarters back in July 2016 due to business inquiries, I fell in love with the atmosphere, the diversity, all the exciting and diverse products you were developing, and the overall Relayr company. I wanted to go back ever since.

Why Me?

I would make a great fit in Relayr because my work experience, my passions and know-how about software development in the IoT industry would help Relayr to achieve the Digital Transformation that Relayr is trying to achieve. I would also help in the near future to lead teams due to my academic profile (which is 5+ years of university studies, with a project management orientation), this way, I could improve the internal processes to make Relayr an even better company.

Sincerely,

Victor Gonzalez
